

**ARCTIC WOLF™**  
BY HAMMOND AIR CONDITIONING LTD.

## Arctic Wolf™

*The new leader of the pack  
in quality air conditioning systems*

When it comes to staying cool on the job, professional operators flip the switch on quality built Arctic Wolf™ aftermarket air conditioning systems by Hammond Air. No

matter how large or specialized the equipment, Hammond has the a/c system to match at a cost less than factory air. We guarantee it.

At Hammond Air Conditioning, we back our products with on-site installation services, full service warranties and critical long-term parts and service support. Over 20 years of experience has made Hammond Air Conditioning Ltd. a leader in this industry.

## Kits for all kinds of equipment Big or small – new or old

Caterpillar, Case, John Deere, Komatsu, Liebherr, Hitachi, Linkbelt, Bobcat, Ford New Holland, Kubota, Massey Ferguson, Hyundai, Volvo. Just to name a few.

We have worked on them all. Our motto is, "If it has an engine and a cab - Hammond Air has an Arctic Wolf™ aftermarket system to match." We know and understand wheel loaders, dozers, excavators, lift trucks, farm tractors, skid steer loaders, motor graders, combines and some machines that defy convention or identification.

In fact, our computerized database has an integrated aftermarket air conditioning system to match almost every piece of equipment at work today, even if it was built years ago. That's over 600 systems. Delivered to your door ready for installation. Tell us your requirements. We have the air conditioning solution to match.

## Cool climate control for today's smart cab environment

Today's equipment operator lives in an air conditioned home and drives to and from work in an air conditioned vehicle. We know that on the job, everyone is more productive in a cool and climate controlled cab. Arctic Wolf™ from Hammond Air Conditioning Ltd. meets your needs with custom designed and fully integrated aftermarket systems that match today's smart cab environments.

Complete with step-by-step instructions, our kits are ready for dealer or end user installation. The end result is a quality a/c system that is custom designed to meet your needs – and save you money.

*The A/C system's electrical controls are usually dash mounted in existing factory locations.*

## How does the Arctic Wolf™ system work?

- You provide us with precise vehicle horsepower and cab specifications. In most cases, just tell us the year, make and model.
- We refer to our computerized database, which holds the specifications for over 600 separate air conditioning systems.
- From Case to Tigercat and Deere to Dresser or Atlas to Zetor, we know them all. If it has an engine and a cab, we have a system to match. If we don't have the system, we will design one to your equipment's specifications.
- Hammond Air Conditioning then designs, manufactures and delivers a system that meets your precise aftermarket needs. The end product is a fully integrated system that delivers maximum cooling efficiency.
- We will install that system for you using one of our fully stocked service vehicles. Or we will deliver the perfect kit ready to be installed by you or your Arctic Wolf™ dealer.
- But the story doesn't end there. We back our full line of integrated Arctic Wolf™ air conditioning systems with year-round parts and service support. We get to you quickly because we know how important a cool working environment is to maintaining operator productivity.

Radiator mounted condenser on most systems take advantage of existing space on the radiator or fan screen. A factory-styled appearance with fewer electrical components means trouble-free operation. Electric condensers are recommended for some extreme duty applications.

Arctic Wolf™ supplies pre-assembled hoses for many of its kits reducing installation time. All fittings, ties, hose wrap and miscellaneous parts are supplied in every kit.

Arctic Wolf™ uses all their own wiring from the blower switch on to make installation and trouble shooting easier and quicker.

Engine driven compressors are usually run off a separate belt to isolate the air conditioning system from normal machine operation. This prolongs belt life and reduces the possibility of machine down time. Arctic Wolf™ uses the rugged SANDEN compressor line in most of its kits.

Arctic Wolf™ evaporators are custom sized to fit in the factory supplied area. Many systems are easy "drop in" designs that enable quick neat factory-like installation.

**TESTIMONIALS**

*"Hammond Air understood my machinery and environmental requirements and arrived with a van loaded with all the right parts and created the best possible solution right in front of me."*

*Landfill Operator*
